With the advent of Fourier transform spectrometers of great sensitivity, it has become practical to obtain carbon-13 nuclear magnetic resonance (¹³C NMR; I³C NMR; CMR) spectra routinely on organic molecules, and this technique has become one of the highest utility in determining structures of organic unknowns. When the usual spectrometric techniques proton magnetic resonance (H-1 NMR; IH ...

[Carbon-13 NMR Spectral Problems \(Organic Chemistry\) 1981 ...](#)

Carbon nucleus resonates at a different frequency range than proton does, which makes it possible to have all the signals as singlets. However, you need to know that signal splitting in ¹³C NMR by neighboring hydrogens does occur which leads to complicated splitting patterns. And that is why a technique called broadband decoupling is used. Most ¹³C NMR spectra that you are going to see are ...

[Carbon-13 NMR Spectroscopy](#)

As such ¹³C NMR is an important tool in chemical structure elucidation in organic chemistry. ¹³C NMR detects only the ¹³C isotope of carbon, whose natural abundance is only 1.1%, because the main carbon isotope, ¹²C, is not detectable by NMR since it has zero net spin. Some of the properties of ¹³C NMR:

Spectroscopy Problems. In each of these problems you are given the IR, NMR, and molecular formula. Using this information, your task is to determine the structure of the compound. The best approach for spectroscopy problems is the following steps: Calculate the degree of unsaturation to limit the number of possible structures. Remember, each ...

[Carbon-13 NMR Spectral Problems \(Organic Chemistry\) eBook ...](#)

The ¹³C-¹³C spin-spin splitting rarely exit between adjacent carbons because ¹³C is naturally lower abundant (1.1%) ¹³C-1 H Spin coupling: ¹³C-1 H Spin coupling provides useful information about the number of protons attached a carbon atom. In case of one bond coupling (1 J CH), -CH, -CH₂, and CH₃ have respectively doublet, triplet, quartets for the ¹³C resonances in the spectrum ...

Carbon-13 nuclear magnetic resonance spectroscopy, still a relatively unfamiliar technique to the organic chemist, is now being applied to study of carbohydrate structure, a new area well suited for examination of configurational and conformational effects. Dr. A. S. Perlin, with coworkers B. Casu and H. J. Koch, has carried out at the chemistry department of McGill University, Montreal, a ...

nmrshiftdb2 is a NMR database (web database) for organic structures and their nuclear magnetic resonance (nmr) spectra. It allows for spectrum prediction (¹³C, ¹H and other nuclei) as well as for searching spectra, structures and other properties. Last not least, it features peer-reviewed submission of datasets by its users. The nmrshiftdb2 software is open source, the data is published ...

Carbon-13 has a nuclear spin (I = ½) and makes up 1.1% of all naturally occurring carbon, a high enough abundance along with modern technology to make carbon 13 nuclear magnetic resonance spectroscopy (¹³C-NMR) a useful technique. Since carbon is the element central to organic chemistry, ¹³C-NMR plays an important role in determining the ...
